

Greetings from NativeWit!!!!!!

ShowMyMovies

Clone the application given in the gif image. Should be integrated with public API [<https://developers.themoviedb.org/> or any other API you are comfortable with].

Must Have Features:

- Scrollable TabBar
- Lazy Loading
- Animation in page transitions
- 
- Image Carousel in the details page without using plugins (if possible)

The application, preferably, can be developed using Bloc (either plugins or the sink/stream concept). Emphasis will be on code quality, reusability and basic coding standards such as KISS, YAGNI, DRY and SOLID principles. Regarding the UI, the GIF shared is the basic expectation from us. You can be as creative as you want with respect to the UI and animations (no compulsion to stick to it).

Kindly contact us in case if you have any doubts.

All the very best!!!!!!
